DETAILED ACTION

Inventorship

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 2, 3, 4, 7 and 8 rejected under 35 U.S.C. 102(a) as being anticipated by Yoshida Japanese Patent No. JP 10339822 A. Refer to the appropriate drawings or parts of the

Application/Control Number: 09/868,766

Art Unit: 2874

translated specification. Yoshida discloses an optical fiber for amplification with all of the limitations of the abovementioned claims. Regarding claims 1 and 3, Yoshida discloses an optical attenuator in the form of a single mode optical fiber (drawing 1) comprising a core (2) containing a dopant which attenuates (paragraph 24-26) transmitted light more when its wavelength is longer (drawing 5), said dopant being contained only in a dopant area being limited to a center portion of the core (paragraph 2-5), said core having a refractive index at the center portion greater than the peripheral portion of said core (drawing 6b). Yoshida further discloses that the distribution of the of the refractive index takes the from of square wave shapes as mentioned by instant claims 2, 4, and 8. Referring to claim 7, Yoshida also discloses that the core can be doped instead with a dopant that attenuates shorter wavelengths (paragraph 22 and drawing 4).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5, 6, 9, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida in view of Morishita Japanese Patent No. JP 11264908 A. Refer to the appropriate drawings or parts of the translated specification. Yoshida as applied above, discloses an optical fiber for amplification with a majority of the limitations of the present invention; however, the reference fails to teach doping of a peripheral part of the core.

Application/Control Number: 09/868,766

Art Unit: 2874

On the other hand, Morishita discloses an optical attenuator that teaches the limitation that the Yoshida reference lacks. Regarding claims 5 and 9, Morishita discloses an optical attenuator in the form of a single mode optical fiber (drawing 1-5) comprising a core containing, in a dopant area, dopant which attenuates transmitted light when its wavelength is longer (paragraph 8) (or shorter, depending on the dopant being used), (also see drawing 2)wherein the dopant area is limited to a peripheral part of the core (paragraph 10-11) and having a refractive index at the center part of said core greater than that of the peripheral part of said core.

Morishita teaches that it is advantageous to use different dopants to dope the inner and outer cores of an optical fiber (paragraph 15 and 16 and drawing 2), in order to control the magnitude of attenuation of particular wavelengths. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the fiber attenuator disclosed in Yoshida, to contain different doping combinations and concentrations disclosed in Morishita.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rosenberger U.S. Patent No. 3,843,229 discloses an optical waveguide having a graded refractive index core formed of silicon and germanium.

Loeb U.S. Patent No. 6,134,366 discloses a reduced dipersion optical waveguide and methods for fabricating the same.

Desurvire U.S. Patent No. 5,892,876 discloses an optical fiber including a fluorescent dopant.

Art Unit: 2874

Aiso U.S. Patent No. 6,055,353 discloses an optical fiber for optical amplification.

Espindola U.S. Patent No. 6,151,438 discloses a fiber device having variable refractive index region proximal the core.

Imoto U.S. Patent No. 5,570,448 discloses a rare earth element doped multiple core optical fiber.

Tirlioni U.S. Patent No. 6,321,016 discloses an optical fiber having low non-linearity for WDM transmission.

Fotheringham U.S. 5,013,131 discloses a single mode optical fiber and process for its production.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel E Valencia whose telephone number is (703)-305-4399. The examiner can normally be reached on Monday-Friday 9:30-6:00.

The fax phone numbers for the organization where this application or proceeding is assigned are (703)-308-7724 for regular communications and (703)-308-7724 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)-308-0956.
